JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for crystallization of lysozyme 575
– for epitaxy growth 32, 39
– for melt growth under microgravity 1

Cellular growth
– of alloys 583
Computer simulation
– of binary solutions 592
– of chemical vapor deposition reactor 527
– of lithium niobate melt flow 204
– of strain relaxation 421
Constitutional supercooling
– for solidification and melt 276
Convection
– of lithium borate 172, 204

Dendritic growth
– of neodymium barium cuprate 118
Device characterization
– of diodes 382
– of electronic materials 441
– of heterojunctions 101
– of lasers 13
– of quantum wells and dots 77, 603, 608
Diffusion control
– of lithium borate 172, 276
Diodes, see Device characterization

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 96, 185, 543

Heat flow control 329
Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of aggregation 265
– of growth 19, 32, 39, 213, 236, 251, 287, 297, 368, 583, 617
– of interface control 13, 341
– of nucleation 236

Lasers, see Device characterization
Lasers, crystals for
– metal fluorides 510
– yttrium calcium oxaborate 335
Lysozyme 265, 575

Melt growth technique
– by Bridgman–Stockbarger method
– – of copper indium gallium selenide 137
– – of indium antimonide 96
– – of lead tin manganese telluride 483
– by Czochralski method
– – of alkali halides 476
– – of aluminum tungstate 169
– – of barium yttrium europium chloride 515
– – of bismuth silicate 329
– – of cadmium tungstate 191
– – of europium lithium niobate 185
– – of neodymium yttrium vanadate 199
– – of potassium zinc chloride 148
– – of rubidium zinc chloride 148
– – of scandium tungstate 169
– – of ytterbium lithium niobate 185
– by floating zone method 1, 179
– – of chromium borate 472
– by laser heated pedestal
– – of strontium hafnium oxide 483
– by uniaxial solidification 629
– – of binary alloys 305
– – of neodymium barium cuprate 118
Microgravity, growth under 182
– of gallium antimonide 1
Morphological stability 276
– of binary alloys 305
– of calcium carbonate 236
– of germanium 617
– of neodymium yttrium vanadate 199
– of niobium carbide 143
– of vicinal (100) surfaces 19

Nucleation
– of aluminum nitride 45
– of aluminum trihydrate 558

0022-0248/99/$ – see front matter © 1999 Elsevier Science B.V. All rights reserved.
PII: S0022-0248(99)00126-8

– of barium chromate 227
– of barium sulphate 227
– of binary solutions 592
– of calcium silicate hydrate 565
– of diamond 326
– of gallium nitride 32, 39, 55
– of neodymium barium cuprate 427
Numbers
– Grashof 204
– Marangoni 204

Phase diagram
– of aluminum nitride 45
– of neodymium barium cuprate 427

Quantum wells and dots, see Device characterization

Solution growth technique
– by electrochemistry
– – of calcium carbonate 236
– by flux method
– – of diamond 326
– – of neodymium boron carbonate 435
– – of ortho-enstatite crystals 155
– by gel method
– – of barium chromate 227
– – of barium sulphate 227
– – of fullerene nanoprecipitates 126
– by low temperature method
– – of calcite 213
– – of calcium phosphate 550
– – of hen egg white lysozyme 265
Statistical mechanics
– of segregation 414
– of solid–liquid interface 297
Stefan problem or moving boundary problem
– for dendritic array 287
– for solidification and melt 276
Superlattices and multilayers
– of cadmium sulphide 391
– of nitrides 353
– of zinc sulphide 391
Surface structure
– of aluminum trihydrate 558
– of calcium europium fluoride 490
– of calcium neodymium fluoride 490
– of gallium nitride 348
– of germanium silicon heterostructures 407
– of indium aluminum arsenide 608
– of silicon 112, 613

Thin film growth, epitaxy
– by magnetron sputtering 498
– by liquid phase epitaxy
– – of aluminum nitride 45
– – of gallium arsenide 341
– – of indium gallium arsenide 368
– – of neodymium YBCO 435
– by metalorganic molecular beam epitaxy
– – of indium gallium arsenide 368, 375
– by molecular beam epitaxy
– – of boron titanium oxide 161
– – of calcium europium fluoride 490
– – of calcium neodymium fluoride 490
– – of germanium silicon 407
– – of indium aluminum arsenide 608
– – of indium arsenide 70, 321, 603
– – of mercury cadmium telluride 102
– – of nitrides 353
– – of silicon 106, 112, 613

Vapor growth technique
– by chemical transport
– – of titania 527
– by chemical vapor deposition
– – of diamond 446
– – of gallium nitride 55
– – of silicon carbide 458
– – of III–V compounds 19
– by evaporation and condensation
– – of C_{60} 441
– by metalorganic chemical vapor deposition
– – of aluminum gallium indium phosphide 382
– – of cadmium telluride 90
– – of gallium nitride 63, 85
– – of indium gallium arsenide 77, 559
– – of indium gallium nitride 85
– – of zinc selenide 399
– by pulsed laser deposition
– – of gallium nitride 362
– – of cerium oxide 505

Whiskers growth
– of niobium carbide 143
– of silicon 106
– of silicon carbide 467
